

SMTP Enumeration

SMTP Enumeration

Attempts to enumerate the users on a SMTP server by issuing the VRFY, EXPN or RCPT TO commands. The goal of this script is to discover all the user accounts in the remote system.

```
nmap -p 25 -script=smtp-enum-users [TARGET IP ADDRESS]
```

Attempts to relay mail by issuing a predefined combination of SMTP commands. The goal of this script is to tell if a SMTP server is vulnerable to mail relaying.

```
nmap -p 25 -script=smtp-open-relay [TARGET IP ADDRESS]
```

[Room](#) that will help network services enumeration.
